consortium

The R Project for Statistical Computing has experienced tremendous growth

Over **2 million** users

Adoption in a **broad range of industries**: Biotech | Finance | Basic research | High tech

Widely **integrated** into 3rd party analysis, visualization, and reporting applications.

Supported by vibrant **open source** community

Group of Organizations providing support to the R Community, R Foundation and groups and individuals using, maintaining and distributing R software

Goals and Objectives:

- To create infrastructure and standards to benefit all the users of the R language.
- To promote the R language as a vital component of a production Data Science platform, in industry, academia, and government.
- To create and promote best practices for the development and maintenance of R language code and applications by R authors and users.
- To make it easier to use R in more environments, by developing and promoting best practices for evaluating, adopting, validating, and managing R code and applications in an end user organization.
- To support the annual useR conference as the primary conference for the R community.
- To provide information and metrics relating to the ongoing growth and adoption of the R language.

Infrastructure Projects

- R Consortium manages projects via the Infrastructure Steering Committee (ISC)
- The goal of the Infrastructure Steering Committee (the ISC) is to support projects that, broadly construed, help the R community
